

DRIVELOCK SOLUTIONS

Antivirus

Optimum Antivirus with DriveLock, powered by **CYREN**

- + Fully integrated into DriveLock management console.
- + One agent, no additional use of software required.
- + Central monitoring and managing files.
- + Removable media remain locked until it is ensured that they are free from malware.
- + The BSI (Federal Office for Security in Germany) recommends scanners from different manufacturers on server and endpoint.

Optimum Antivirus with DriveLock, powered by **CYREN**

Worldwide the threat of viruses, spyware, Trojans and other malicious software increases in a frightening manner. The accelerated globalization by the Internet presents new challenges to the security of our IT systems. The creation of new malicious software has become almost a cinch and is used commercially in a considerable scope. But the threat of industrial espionage should not be underestimated, even as a small or medium-sized company.

An intelligent, multi-layered security strategy to protect critical business data has become an essential factor for success.

Intelligent allround protection

As a part of **DriveLock**, Antivirus Realtime Protection protects your desktops, laptops and servers against these threats. **DriveLock** uses the Embedded Antivirus Technology of the security provider CYREN. Through a proactive detection system it is possible to scan diverse potential hazards at the same time – so it is given that the antivirus protection is always up-to-date and protects against latest threats. CYREN provides Antivirus in real-time.

How it works

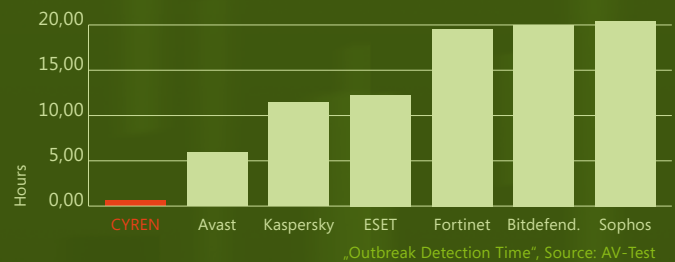

- + **Quick identification of harmless files** – over 90% of all for viruses scanned files are harmless. Therefore our engine is optimized to detect such safely files very quickly.
- + **Low resource consumption** – low CPU and memory access enable full functionality at half the hardware (compared to some competitors).
- + **Small footprint** – our engine is less than 2 MB big, definition files can be compressed to 35 MB.
- + **Low bandwidth** – small definition files reduce the download bandwidth, updates are smaller than 2 MB.

Unmatched Outbreak Detection Time

Due to the high scanning speed of Antivirus Realtime Protection the **DriveLock** Antivirus engine can fully exploit their superior performance, especially at speed. **Your advantage:**

- + The user experiences no impairment in his work.

Unmatched Busy RAM Usage

The low resource consumption is unique: During operation, only 2-3 MB of RAM for real-time protection is claimed. **Your advantage:**

- + No extended start time of the computer.
- + No additional memory requirements.
- + No new hardware.

The seamless integration in the **DriveLock** Device Control and the smooth interaction with the **DriveLock** Application Control enables an intelligent allround protection that reliably protects your system from zero-hour attacks and undetected malware.
